

FOR IMMEDIATE RELEASE

Centerfield's Stimulus Package a HomeRun for IBM System i Customers

Stimulus pricing will allow performance enthusiasts to get great prices for a limited time.

ROCHESTER, MINNESOTA USA Feb 09, 2009 Starting today, Centerfield Technology, Inc. (<http://www.centerfieldtechnology.com>) is celebrating the current economic stimulus program with promotional pricing of their performance suite HomeRun.

"The economy is driving business changes that tools can make possible." says Mark Holm, Centerfield's Chief Technology Officer. "Many times we've seen where we have made an immediate impact on system performance so orders, business processes and workloads can be executed faster and with more efficiency. To use a baseball analogy, we are in the fifth inning of an economic downturn. There are very few applications that are as efficient as they could be, and Centerfield can help those applications throw fast balls the rest of the game."

Whether you are using Microsoft's .NET technology, IBM's WebSphere, RPG with SQL, or an off-the-shelf ERP package, Centerfield can help with tuning software or quick-hit consulting.

HomeRun, Centerfield's suite of database tools is currently priced per partition. For a limited time, HomeRun will be priced \$18,000 for a complete System i footprint. In addition, existing customers may license additional partitions for the cost of maintenance and support only.
